DETAILED ACTION

Election/Restrictions

Amendment Entry

1. Applicant's election of Group I, claims 1-8, 11-18, and 22, without traverse in Paper No. 9 is acknowledged and has been entered. Applicant's amendment is also acknowledged and has been entered. Claims 9 and 19 have been cancelled. Claims 23 and 24 have been added. Accordingly, claims 1-8, 11-18, and 22-24 are pending. A restriction requirement has been set forth in light of the newly submitted claims in addition to the claims currently pending of record which are deemed to encompass two groups of inventions.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, 11-18, and 22, drawn to a method of detecting a polypeptide from pre-pro B-type natriuretic peptide to determine non-ST elevation acute coronary syndrome, classified in class 436, subclass 71, for example.
- II. Claims 23-24, drawn to detecting a level of BNP and pro-BNP as a prognostic markers in addition to cardiac Troponin-T and cardiac Troponin-I to predict cardiac mortality rate in a patient, classified in class 435, subclass 973, for example.

The inventions are distinct, each from the other because of the following reasons:

Art Unit: 1641

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different functions, and different effects in that Invention 1 determines pre-pro B-type natriuretic peptide to evaluate non-ST elevation acute coronary syndrome and Invention II uses BNP and pro-BNP as a prognostic marker in addition to cardiac Troponin-T and cardiac Troponin-I to predict cardiac mortality rate.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper. Literature search for each method is distinct since the structural requirements of each invention are different. While searches would be expected to overlap, there is no reason to expect the searches to be coextensive.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1641

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
